

Jean-François Rondeau

Engineering & Innovation | Complex Systems, Software & AI

Greater Paris, France • +33 (0)6 62 18 91 06 • contact@jfrondeau.fr • linkedin.com/in/jean-francois-rondeau • github.com/rondeaujf

Technology executive and former deep-tech subsidiary CEO (Ph.D. in Physics & Acoustics) with 20+ years leading global engineering organizations. Uniquely positioned at the convergence of complex physical systems (acoustics, materials, embedded electronics) and modern software & enterprise AI — the “Physical AI” space. Track record: order intake doubled from **€250M to €520M** in two years, **+8% operating income** on a diversified hardware+software subsidiary, group AI roadmap approved and executed at Executive Committee level. Hands-on software practitioner: API-first architecture, CI/CD, and AI-assisted engineering on a production platform I build and operate myself.

CORE COMPETENCIES

Executive Leadership & Strategy P&L management • C-suite & board communication • global cross-functional teams (100+ engineers) • subsidiary scaling • M&A support • change management

AI & Digital Transformation enterprise AI roadmaps • ML/GenAI use-case selection & industrialization • data monetization & connected services • data governance (GDPR)

Systems & Software Engineering hardware/software integration • API-first architecture (OpenAPI) • CI/CD & software quality • signal processing • advanced acoustics & Active Noise Control (ANC)

PROFESSIONAL EXPERIENCE

Technical Director & Group AI Sponsor

Jan 2023 – Present • France

Trèves Group — global mobility & industrial technology supplier

Global technical authority for product strategy, innovation roadmaps and advanced engineering of complex material & acoustic systems; sponsor of the group's AI transformation, reporting to the Group Executive Committee.

- **Business growth:** doubled order intake from **€250M (2023) to €520M (2025)** through strategic RFQ leadership and advanced engineering alignment with global customers.
- **Enterprise AI transformation:** designed and executed the corporate AI roadmap approved by the Executive Committee — use-case screening, ML/GenAI feasibility assessment, organizational adoption through targeted change-management and training programs.
- **Business-model innovation:** shifted from traditional hardware supply toward end-user-centric solutions and services leveraging fleet managers and mobility players.
- **Operational excellence:** led transformation projects improving productivity, development lead times and quality standards.

Innovation Director & CEO, CREO Dynamics (deep-tech subsidiary)

Aug 2020 – Jan 2023 • France / Sweden

Faurecia Clarion Electronics

Full P&L responsibility for a deep-tech subsidiary; strategic product roadmap for connected services, data enhancement and sustainable technologies.

- **Scale-up & profitability:** transformed a pure engineering house into a profitable hardware+software product platform, reaching **+8% operating income**.
- **De-risking & diversification:** secured long-term, non-automotive business models, breaking single-industry dependency.
- **Technology leadership:** built and led an international expert network in on-board electronics, digital signal processing and AI integration.
- **Global market position:** established the company as a premier player in Active Noise Control and smart acoustics, winning multi-year programs across Europe, North America, Japan and China.

Global Product Line Director

Jul 2018 – Jul 2020 • France

Faurecia Clarion Electronics

Global product strategy, market intelligence and P&L for a major electronics product line.

- Secured **€450M** in annual lifetime-sales order intake through strategic business development and global RFQ leadership.
- Evaluated and supported M&A activities to accelerate international expansion and technology acquisition.
- Won multiple international innovation awards (2019, 2020) for market-differentiating IoT product development.

Earlier Leadership Roles

2002 – 2018 • France / China

Faurecia Interiors

- **Global Technology Senior Manager, Shanghai (2014–2018):** directed international technology knowledge management and standardized development processes — **–15% R&D cycle time**, **–30% physical prototypes**.

- **Materials & Acoustics Manager (2002–2014):** led an advanced acoustics R&D team (ray-tracing and porous-media simulation) supporting global engineering and marketing programs.

SOFTWARE ENGINEERING --- HANDS-ON PRACTICE

Solo-designed, built and operated a production SaaS platform for educators (~**55,000 LOC**, 4.5 years of continuous delivery) with a native Android companion app — concrete evidence of modern, hands-on software leadership.

- **API-first architecture:** decoupled PHP 8.3 backend, standardized response envelope & versioning; OpenAPI contract generated from code and consumed by an auto-generated Kotlin SDK — one contract, two clients (web + Android), synchronization enforced by CI.
- **Velocity:** native Android app (Kotlin, Jetpack Compose, MVVM, Retrofit/coroutines) designed, built and shipped in under two weeks by reusing the existing API contract.
- **Engineering discipline:** GitHub Actions CI/CD with blocking quality gates — static analysis at zero-error, unit + real-database integration tests, JS test suites, contract-drift detection, post-deployment health checks; 26 idempotent SQL migrations rolled dev → staging → production.
- **Application security:** closed unauthenticated exposure paths, fixed XSS / IDOR / path-traversal vulnerabilities; JWT authentication, per-user Google OAuth 2.0, encrypted storage and biometric authentication on mobile.
- **GenAI in production:** native Claude API integration (prompt caching, bounded context) powering teacher-assist features; daily AI-assisted engineering practice — agentic coding, automated code review, large-scale migrations.

EDUCATION & CERTIFICATIONS

Executive Certificate --- AI & Big Data Project Management (RNCP) 2025 – 2026

Université Paris Dauphine-PSL / MINES Paris Executive Education

175-hour executive program: enterprise AI strategy, MLOps, data governance (GDPR), predictive maintenance, end-to-end deployment of AI in production.

Ph.D., Applied Acoustics & Fundamental Physics 1999 – 2002

Le Mans University, France

M.Sc., Applied Acoustics & Fundamental Physics 1997 – 1999

Le Mans University, France

LANGUAGES & AFFILIATIONS

Languages French (native) • English (professional)
